## ZShut Free

----- ZShut is a tiny app to set interval shutdown on any Windows PC (XP/Vista/7). Don't worry about the low performance because of that. There are no other running apps during shutdown. Useful features: ----- - Configurable timeout - Auto-disable each connected USB device when system is rebooted (cable only) - Log off your user, prevent starting an unnecessary reboot - Autostart when Windows starts PowerDNS is an advanced open source local DNS cache, written in a distributed and fault-tolerant manner. PowerDNS Features: ~~~~~ PowerDNS supports many options to tune the system: - Using a small, fast and easily manageable caching server in front of your network. - Using a scalable distributed database backend. - Run as a service, or on demand. - Ping-based and/or memory-based local caching. - Re-use existing mail server for mail-based DNS caching. - DNS-based authentication and authorization - Same day emailing of updates to subscribers - Shared secrets (digest and TLS) - DNS-based authentication and authorization using trusted software - Shared secrets for SSH and shell access - Statistics for performance, mail, updates and subscribers. - Copy/Paste DNS zone data. - Restart of daemon after crash. - Zones and subscriptions support for multiple servers. - Connected devices support. - Virtual domains using separate servers. - Zone and subscription cache support for all versions of PowerDNS. - Custom DNS servers support for PowerDNS. - PowerDNS can be controlled from webserver. - Subdomains can be configured for each subscriber. - Supports mail server (SMTP) and file based authentication (DSN, SSL). - Many modules can be enabled and/or changed from the console. - PowerDNS can control the network, if you do not have a router. - Clustering support. - PowerDNS can control the BIND server. - And many more... Network Monitor 1.0 is a small application to check and monitor, on a timer, the network activity of a selected host. Windows XP/Vista/7/8 \* 32 Bit Support of Windows 10 \* 64 Bit The Network Monitor can be used to have an overview of the network activity of a selected computer

## What's New in the ZShut?

"ZShut allows you to shutdown your PC after a set amount of time. Simply set the time you want your computer to shutdown, and you are set to go! No matter how many time units you select, your PC will shutdown exactly at that time. You can also specify at what time you want the PC to restart or you can log off. Pressing Ctrl+Alt+Del keys will shutdown your PC once the time has been reached. You can choose a few different time units to be used. Example: Hours: 1 Hours Days: 7 Days Years: 20 Years Millions of Years: 2000 Millions of Years There are no minimum or maximum time limits. Support of 4 different languages: English, Polish, Spanish and Turkish. ZShut will count down the time until it reaches the specified time. It will shut down your computer after the specified time. ZShut will only shut down the PC when you pressed Ctrl+Alt+Del keyboard shortcut. ZShut includes a custom shortcut key to force the shutdown of your PC. Just type Ctrl+Alt+Del in the shortcut box, press OK and your PC will be shutdown." How to download and install ZShut? Download and install the ZShut utility from the links that have been provided above. Save the ZShut.jar file and extract the contents of the.JAR archive into the 'C:\Program Files\ZShut' folder. Open the 'C:\Program Files\ZShut' folder and double-click on the 'ZShut.jar' file to execute the ZShut utility. When you press Ctrl+Alt+Del, your computer will shutdown according to the time interval you have selected. When you want to stop the PC, use the ZShut shortcut key combination as mentioned in the description. No restart or shutdown will take place if the time limit is exceeded. Although the ZShut utility is a small application, it allows you to perform a variety of functions. Now you can shutdown your computer at specific times and also restart it. The ZShut application is easy to use and it is guaranteed that this small application will make your life much easier. I am not connected to the Internet. I can not download the ZShut utility from the Internet because I have a firewall there. I have installed ZShut by using the Stand-
