On top of that, it also provides a summary of how the program works, a tutorial, and instructions on how to adjust your settings. provided for each of the tools. The interface for the program is fairly minimal, only having a few pieces of information that are vital for its users. These include information pertaining to time and date, a battery status and details on the version of the program. What's nice about the interface is that it includes both text and images in its interface. It also comes with a tool that allows its user to adjust the size of the interface, and the interface size can be changed anytime. In terms of its general performance, it has a very simple way of navigating through the different tools. These include a left and right arrow button that open a menu as well as an up and down arrow button that moves through various tools. There is also a plus sign button that allows its user to add new tools to the interface. One thing that is good about the interface is that it does not change throughout the program. Although this might not be a good thing for some, it is a good way of maintaining a consistent feel for the interface as everything is the same. With icSpeech, its users can create three different types of profiles. The first is a personal profile, the second is a soundboard profile, and the last one is an evaluation profile. The first two are free, while the last one is an in-app purchase. The idea behind the profiles is to allow the user to adjust their settings according to their preference, whether this is on a technical level, a comfort level, or something else. Overall, the interface of icSpeech is quite simple and easy to use. It also comes with a solid set of tools. All in all, it is an excellent program that can be used to address a wide range of issues pertaining to speech. Description:
